

Jump Mechanics Mastery Guide

All great jumpers have one thing in common— great jump mechanics!

For some athletes this comes natural and for others it requires a significant amount of learning and practice.

Just like mastering shooting mechanics can improve your shot, jump mechanics mastery is a crucial step for improving your bounce!

Keep in mind, we don't want to become over-thinkers. Throughout the program we have jump mechanics days where I want you to diligently practice your mechanics. However, come game time these mechanics MUST feel natural.

If you are thinking about how you jump you will likely decrease your vertical. Save the thinking for the learning/practice stage and get enough reps that it becomes an unconscious skill.

1) Standing Vertical Jump / Landing Mechanics

<https://youtu.be/QV2J2QRaeOI>

Mastering your standing vertical landing and takeoff is essential for force production and injury prevention.

2) Two-Foot Approach Mechanics

<https://youtu.be/eUxm1zgK3y4>

This is the foundation for powerful, controlled two-foot dunks and explosive approaches.

3) One-Foot Approach Mechanics
